ANNALS, APR 95

SPRING OF 1895.

WHOLESALE TRADE LIST.

— OF THE —

Woodlawn * Nurseries.

FOR NURSERYMEN AND DEALERS ONLY.

ALLEN L. WOOD, PROPRIETOR,
ROCHESTER, N. Y.

Grounds and Office on Culver Street, north of East Main Street. Take East Main Street Electric Car, only two minutes walk from Car.

Parties wanting a large amount of small fruit are invited to write me for Special Prices.

PEARL GOOSEBERRIES.

The Pearl is a new candidate for horticultural favor, which we offer to the public, confident that it will head the list of Gooseberries. We believe that all that is necessary to prove what we say, is to give it a fair trial, and then when it is as well known abroad, as it is at home it will advertise itself.

A Few Testimonials From Prominent Men.

The following is the report of the editor of the Canadian Horticulturist, who saw this fruit in bearing on the grounds:

"The Pearl is a Gooseberry grown from the seed of Houghton, crossed with Ashton Seedling, by Professor William Saunders, and worthy of special notice because: (1) of its good quality; (2) its size; (3) its productiveness; (4) its freedom from mildew.

Now, with reference to these points, I will state the result of my observations: The quality is good, very much like the Downing in this respect, as well as in color marking; but in size it averages nearly double that berry, and that in spite of the prodigious crop under which the bushes were laden. There was a row of some sixty fine bushes one year planted, and most of them were literally bent to the ground with heaps of fruit. The average was eight berries per inch of wood, and on one bush we estimated that there must have been 2,500 berries. We have had great loads upon the Smith, the Downing and others, on our own grounds, but we have not seen quantity of fruit upon the bushes of any variety to equal that upon these bushes of the Pearl. Should this productiveness prove constant, the berry will be of great value for the market. With regard to the mildew, all we can say is what we saw, viz., it was entirely free from it. One bush stood next a Whitesmith, and while the berries of the bush were covered with mildew and utterly worthless, no trace of this fungus could be found upon the Pearl."

From H. C. KERMAN, GRIMSBY NURSERY, ONT.

January 11th, 1895.

ALLEN L. WOOD, Rochester, N. Y.

Dear Sir:—Yours of the 8th at hand, I can conscientiously recommend the Pearl. It is the coming berry, and will when known entirely replace the Downing, it is larger, heavier bearer, strong grower. Entirely Free from Mildew, and as one of our most prominent fruit grower in this district, remarked it is the best thing that has been put on the market, in the fruit tree line for years.

Yours Truly,

H. C. KERMAN.

From the MASSACHUSETTS EXPERIMENT STATION,

Amherst, Mass., January 8th, 1895.

A. L. WOOD,

My Dear Sir:—The Pearl Gooseberry was planted on our grounds last Spring, and consequently has borne no fruit. It has made a good growth however and is Free from Mildew.

Very truly yours,

S. T. MAYNARD.

PEARL GOOSEBERRY.

(The Most Prolific Gooseberry Known.)

This Cut was taken from a branch only three years old. On one bush we estimated that there must have been 2,500 berries, it averages eight berries per inch of wood. See Testimonials.

MICHIGAN AGRICULTURAL EXPERIMENT STATION,

South Haven, Michigan, January 9th, 1895.

A. L. WOOD,

Dear Sir:—I have been testing the Pearl Gooseberry here for several years, in my forthcoming report (now ready for the press.) I grade it for Vigor and Productiveness ten, and for quality nine, upon the scale one to ten.

Yours Etc.,

T. T. LYON.

Granton, Ont., January 9th, 1895.

ALLEN L. WOOD, Esq., Rochester, N. Y.

Dear Sir:—I have fruited the Pearl Gooseberry two years, I find no weak points in it. Plants green and healthy, not liable to Rust, an abundant bearer, size medium to large, no small berries, and brings all the berries formed to perfection. It has proved here more satisfactory than any of the other varieties grown here.

Yours Respectfully,

JOHN LITTLE.

OHIO AGRICULTURAL EXPERIMENT STATION,

Wooster, Ohio, January 15th, 1895.

ALLEN L. WOOD,

Dear Sir:—We have one plant of the Pearl Gooseberry, but that is hardly enough to enable us to judge as to its prolificacy. I judge that it is very prolific, however, and the fruit is of fair size. It seems to be an improvement upon the Downing and no doubt will prove to be a Valuable Variety.

Yours Truly,

W. J. GREEN.

ANNIE L. JACK, the popular writer for the Rural New Yorker.

Hillside, Chateaufqua Basin, Quebec, January 12th, 1895.

Dear Sir:—The Pearl Gooseberry is with us, a prolific bearer, of good sound Fruit, not large but of good flavor. I have not yet seen any tendency to mildew and the foliage holds well and retains its color after fruiting.

Yours Truly,

ANNIE L. JACK.

L. WOOLVERTON, Secretary of the Fruit Growers Association of Ontario.

Grimsby, January 11th, 1895.

MR. A. L. WOOD, Rochester, N. Y.

Dear Sir:—In reply to your favor of the 8th, instant, regarding the Pearl Gooseberry, I have this variety on my grounds, but it has not yet fruited I have seen it fruiting at St. Catharine, and my opinion of it is that it excels the Downing in productiveness, and the berry is a trifle larger than that variety.

I am Sir yours truly,

L. WOOLVERTON.

Lockport, N. Y., January 30th, 1895.

ALLEN L. WOOD, Rochester, N. Y.

Dear Sir:—Yours of yesterday received asking me what I know about the Pearl Gooseberry, I have fruited the Pearl for several years, and now have about one acre planted for fruit, it is a Wonderful Croper, Strong Grower and Free from Mildew, fruit larger than Downing.

Yours,

E. B. LEWIS.

THE "Greenville" Strawberry.

Following are a few of the many flattering Reports on this remarkable Berry for 1894:

TRYONVILLE, PENN., JULY 14, 1894.

Considering the extreme dry and hot weather that we had in this section, the "Greenville" did remarkably well for me this season. The fruit was large, and held out good size until the end of the season the best of any variety that I had. It is certainly a grand berry.—GEO. W. TRYON.

JULY 14TH, 1894.

"GREENVILLE"—This season's trial confirms the good reports made last year. The plants are healthy, productive, and the variety a valuable one to grow for home market.—MICHIGAN AGRICULTURAL EXPERIMENT STATION.

MENOMONIE, MICH., JULY 18, 1894.

We had heavy frosts during blossoming, and no rain until the last week of fruiting, so that no variety had a fair chance this season. "Greenville" was one of the best, however, in size and yield. I had tried rows on both light and heavy soil, and though better on the clay, it was satisfactory on the light soil.—E. W. CONE.

The "Greenville" was exhibited by the originator, Mr. E. M. Buechly, of Greenville, Ohio, at the meeting of the American Association of Nurserymen, held at Niagara Falls, June 6, 1894, and the committee on exhibits reports as follows:

"GREENVILLE"—A handsome, large, pistillate variety, named for the place where it originated. Color, rich, bright orange red, very good quality, moderately firm, and seems to have the necessary characteristics of a good variety for market, family and garden use.

Beyond All Expectations.

MINERVA, OHIO, JULY 9, 1894.

The "Greenville" went beyond all expectations, as many who visited my plantation can testify. They bore a heavy crop of very large berries. I shall plant largely of them next season.—H. H. AULTFATHER.

Quite Promising.

NEW ALBANY, INDIANA, JUNE 20, 1894.

The "Greenville," so far as we can judge, is quite promising. We planted all but the original plants, which we allowed to bear, and which is hardly a fair test.—FAWCETT BROTHERS.

It is Ahead of Bubach.

WESTERVILLE, OHIO, JUNE 29, 1894.

The "Greenville" is all right with us as a market berry, and there are but few varieties for which we can say this much. It is ahead of Bubach—not quite so large, but is more productive and a better plant maker, and shows up better in crate. We had quite a patch of them—enough to satisfy us that they are safe to plant as a first-class market berry. Also that they require but few perfect flowering plants to furnish pollen.—IRWIN BROTHERS.

An Immense Crop.

ITHACA, MICHIGAN, JULY 9, 1894.

In regard to "Greenville" strawberry would say, that I set all the plants I had this Spring, leaving only three strong plants to bear fruit. These bore an immense crop of fine berries—good quality and color. My Spring-set plants of this variety are beauties, and promise as large or larger crop than those three this Summer.—F. W. BROOKE.

The National Nurseryman for July says: "A. L. Wood, of Rochester, brought to this office several boxes of fine specimens of the 'Greenville' strawberry. The variety can not be surpassed. The flavor is pronounced, and there is a richness which we have not found in any other strawberry."

MARENGO, ILLINOIS, JULY 10, 1894.—"Greenville" did well.—C. W. PRESCOTT.

Recommended by High Authority.

ILLINOIS STATE HORTICULTURAL SOCIETY.

OFFICE OF VICE PRESIDENT, CORDEN, ILLINOIS, JUNE 2, 1894.

E. M. Buechly, Greenville, Ohio:

Dear Sir—In reply to your postal of 22d inst., I think well of the "Greenville" strawberry, both as a grower and a cropper. The fruit is of good size and color. I recommend it to planters. Very truly, T. E. GOODRICH.

The next and probably most promising of recent introductions is the "Greenville." This was growing in a field side by side with the Marshall. The plants looked remarkably strong and vigorous, with healthy foliage, and a tendency to multiply rapidly. Very productive, of large sized fruit, with a tendency to fruit in large clusters. The flavor is good. In form it would rank with Bubach. The berry is irregular in shape (only a few of the first ones—E. M. Buechly). However, it is without the white tip, which is an objectionable feature of Bidwell.—J. J. D. in Rural New Yorker.

At Home on Iowa Soil.

OSAGE, IOWA, JUNE 15 1894.

The "Greenville" seems to be at home on our soil. We find it a bearer of large, fine-flavored fruit. We shall plant heavy of it.—GARDNER & SON.

A Good Shipper.

GENEVA, NEW YORK, JULY 14, 1894.

E. M. Buechly, Greenville, Ohio :

We received the "Greenville" berries via express, and they came through in fine order. We kept them several days after arriving, and pronounce them excellent shippers.—E. SMITH & SONS.

AMHERST, MASSACHUSETTS, JULY 13, 1894.

The "Greenville" has been one of the best with us as to productiveness. In quality it is not quite up to the standard, but will prove valuable for market.—Very truly yours, S. T. MAYNARD, of Massachusetts Experiment Station.

BRIDGMAN, MICHIGAN, July 12, 1894.

The "Greenville" did well with us this year. I think when better known will be in good demand throughout the country.—O. A. E. BALDWIN, R. R. View Fruit Farm.

From Rural New Yorker, Editorial.—The "Greenville" is getting much praise, as well as the Marshall. W. J. Green ranks the "Greenville" among the best, as a first class market berry and good enough for home use. Plants were sent to the Rural grounds by E. M. Buechly, Greenville, O., the past Spring. It is a promising variety, though we may not judge it critically from Spring-set plants. The berries are large, broad, heart-shaped, pointed at tip, red flesh, quite firm, and apparently productive as judged June 10. June 20th the vines were still ripening a few berries of fair quality, though the weather was very wet.

One of the Most Productive.

NEWARK, DELAWARE, JULY 14, 1894.

The "Greenville" strawberry has given excellent satisfaction this season. The plants made a vigorous growth and the foliage has been very healthy throughout the season. Fruit large and held its size well to the last. It was one of the most productive varieties.—M. H. BECKWITH, Horticulturist.

WOOSTER, OHIO, JULY 13, 1894.

We are better pleased than ever with "Greenville" for home use or near market. It is not quite as firm as we had thought, but for size, appearance and productiveness it rather exceeds our expectations. We put it at the head of the list for above purposes.—W. J. GREEN, Horticulturist, Ohio Agricultural Experiment Station.

LAFAYETTE, INDIANA, JULY 16, 1894.

The "Greenville" strawberry was still among our best varieties again this season.—J. TROOP, Horticulturist, Indiana Experiment Station.

GENEVA, NEW YORK, JULY 13, 1894.

Replying to your card just received, will say that the "Greenville" strawberry gave us some very fine fruit this year, but the bed was located in an unfavorable place, and the yield is therefore hardly comparable with that of varieties in a more favorable location.—PETER COLLIER, Director New York Agricultural Experiment Station.

NORTH COLLINS, NEW YORK, JULY 12, 1894.

It is a pleasure to report on the "Greenville" strawberry. While it has no prominent characteristic points as grown this season on my place, it is one of the most valuable market strawberries I have tested in a long time. A strong, healthy grower, immensely productive, fruit large, color fine, fairly firm; in fact, a good all around berry, that I now believe will be grown for market inside of five years more extensively than any other variety. I had varieties growing in the same field that have been extensively advertised and highly praised that were a complete failure. "Greenville" has come to stay with us.—E. WILLETT.

ADDRESS ALL ORDERS AND OTHER COMMUNICATION TO

ALLEN L. WOOD,

WOODLAWN NURSERIES.

Wholesale Grower of Small Fruit Plants.

ROCHESTER, N. Y.

TERMS AND PARTICULARS.

My stock of Small Fruit Plants is largest in the World. My facilities and conveniences for storing, packing and shipping are not equalled by any other firm. My responsibility ceases on delivery of goods at Railroad or Express Office. My plants are warranted true to name, and of grades represented. Should any stock not prove true to name, I will either refund the purchase money of same, or replace the stock with stock true to name free; but am not liable for further damages; and while I am exercising great care to prevent mixtures the above is to be a condition on which all stock is delivered. All packing will be done neatly and with strict regard to the interest of the customer. Purchasers will please give shipping directions always. In case no such directions are sent with orders, I will use my best judgment in the matter.

TERMS CASH.—Bankable notes for 30 or 60 days will be accepted from customers of satisfactory record or bank reference. Spring accounts are due before June 1st, when I draw at sight for any amounts due. Interest charged on all bills overdue. All express or freight charges on goods or money must be paid by the customer. If goods are shipped C. O. D., usually one-fourth the amount of bill must be sent with order.

STRAWBERRIES. (Eight Acres.)

Millions of Plants for Early Spring Trade. Headquarters for the Great **Greenville** Strawberry. Roots Straightened out and neatly tied up in bunches of twenty-five. We put in 26 for 25 in every bunch. Box and packing Free. Strawberries packed in burlaps as per tags call for, \$1.00 per 1,000 extra. Special Prices on 50,000 or over. Also for Mailing.

THE COLUMBIAN RASPBERRY.

BY an arrangement with the originator of the Columbian Raspberry, we are prepared to offer to our customers, and to the trade generally, the plants of this valuable fruit for the spring trade of 1895.

The following claims for the Columbian Raspberry, it will be seen, are fully attested by indisputable authority. We have personally had it under observation for the past two years, and can endorse all the claims of the originator and the statements made in the various testimonials.

The accompanying illustration is from a photograph taken July 31, 1894, of the original bush, past nine years of age, and as vigorous, thrifty and productive as ever. It is a seedling of the Cuthbert, grown near the Gregg blackcap raspberry, and believed to be a cross between the two.

The following points show the superiority of the Columbian over all other berries now grown:

1. It is a most vigorous grower, canes ten to sixteen feet in length, and often over an inch in diameter; strong and woody; color light green, changing to bright red in autumn.
2. Its roots are large and spreading and penetrate the soil to a great depth, thus enabling it to resist drouth successfully.
3. It is very hardy, enduring 28° below zero without harm.
4. Fruit very large, often an inch in diameter; shape somewhat conical, color dark red bordering on purple, adheres firmly to the stem and will dry on the bush if not picked; seeds small and deeply imbedded in a rich juicy pulp, with a distinct flavor of its own, making it a most delicious table berry.
5. For canning purposes it is much superior to any other for the following reasons: It holds its form better. Is of a more beautiful color. Is sweeter and richer in flavor. Shrinks less in processing.
6. It makes a fine evaporated berry, retaining color, form and flavor in a most remarkable degree, and selling for fully one-third more than other berries.
7. Its fruiting season is very uniform, extending from July 12 to August 15, and maintaining its high quality to the last.
8. It is a most excellent shipper, never crumbling nor crushing either in handling or transportation.
9. It is wonderfully prolific, yielding over 8,000 quarts to the acre; 3,500 bushes produced on an average five quarts each, or 17,500 quarts.

Two First Prizes at New York State Fair.

In full confirmation of the statements made about the Columbian Raspberry, it may be added that at the Fair of the New York State Agricultural Society, held at Syracuse September, 1894, the **First Prize** was awarded the Columbian Raspberry as the best for **canning** purposes. Also the **First Prize** for **evaporating** purposes.

As a profitable Raspberry it stands to-day unrivalled. No berry grower can afford to be without it.
